

## CSF for target analysis

- TA should be tightly linked to the collection objective.
  - information required about the target
  - Why the need for target info
- TA identifies specific elements that are important to the collection
  - Where in the target is the desired info
  - Who in the target has access to the info
  - Who outside the target has access to the info

## Target analysis process

- identify the intelligence priority
- identify specific place where the info may be found
- Is the target a priority
- Determine sensitivity of project
- Determine urgency of the project
- What collection techniques = quickest answer
- Decide on source of info
- Determine assistance to help with collection

## Collection Plan

- Develop requirements, KIQs + indicators of specific KIT
- Determine who knows what + what
- Determine most appropriate sources for KIQ
- Identify most likely collectors
- Adequate number of collectors + sources should be used
- Protect collectors in order to optimize collection capabilities
- Arrange interaction between collectors + primary sources
